8

The dog wags her tail because she is happy and she is ready to play. The senses the dog uses to play catch is sight hearing, and smell. I know because there is evidence in the passage.

8

I think the dog was excited because the ball smells the same as it did the day before. It connected the smell to fetch, so whenever it smells the ball, it thinks it is going to play fetch. It might not get excited if it is a different ball because the smell is not the same.

16

They're dog can sense the ball. So they know where they are and where the ball is. They've used the ball a lot so the dog's senses are stronger than before. When the dog senses the ball its senses take most of its body to find it when it's a new ball. So the used a lot ball is easy to sense.

8

Because she sense the Ball to make her happy
for her to sense the smell she knew the ball
Reminded her of something.

16

I think that she starts jumping up and down because she knows what they are going to do: Play fetch. So she tries to show her emotion by jumping up and down. If my mother asked me do you ~~to~~ want to go get some ice cream or get a cake just for you I ~~to~~ would show my emotion by saying thank you a bunch of times.

16

Tom's and vicky's dog starts wagging it tail because they are carrying the ball they play with. She senses the smell of the ball she can tell that is the ball they play with she can sense if Tom and vicky are excited.

8

The reason why the dog is wagging its tail and jumping is because the dog senses the ball and remembers what the ball and the kids are going to do, some of the senses the dog uses is its smell. I know this because the dog can probably smell the ball because the dog remembers the smell from whenever he played it last. Another sense is hearing, the dog can hear the ball in the kids hand. Also, the dog hears the kids walk out with the ball. The last sense the dog uses is sight the dog can see the ball and they know what the kids are doing.

16

When a dog waves it tail it means he/she is happy to play fetch outside with Tom and Vicky that's what I think he senses.

16

Tom and Vicky's dog starts wagging her tail because she smells and sees them coming. She smells the ball that they used to play fetch with. She sees them carrying the ball they used to play fetch with. After she smells and sees the ball she probably remembers them had playing fetch before, so, she decides they're playing fetch.

8

The dog starts wagging her tail because, they lost it and the dog was happy that she found it because, she wanted to play the game "fetch" and that she hadn't played with it. And if you didn't know dog's hearing is allows the dog to hear sounds that are about four times further away than a human's weaker hearing can detect. A dog also uses much more of its brain to control its sense of smell than a human brain does: a dog's sense of smell is from 1 million to 100 million times stronger than a human's sense of smell. Dogs also have more muscles in their ears than humans. Dogs can move their ears toward sounds. Finally, dogs can hear high-pitched sounds humans can hear.

16

Tom and Vicky's dog starts to get excited because she can smell the ball because it probably has the dog's smell on it. Also, she can see the same properties like the color, size, and weight that sends her brain a message saying, "That's the ball I play fetch with." So that's why she got excited.

16

The dog senses the ball and wants to try to catch it that is why the dog jumps and wags its tail, and he can locate the ball.

8

The dog could smell the ball he played fetch with and got excited because he wanted to play fetch.

8

Tom and Vicky's dog starts wagging her tail and jumping all over the place when she sees the ball that she plays fetch with because her sense of sight sees the familiar object and makes her realize what it is. Her sense of smell might also tell that it's her ball because it might have her saliva/spit on it and makes her scent realize what it is. This means that she is excited and now she wants to play.

16

The dog starts jumping because he hears the ball and can see it and knows they want to play catch.

8

I believe that the reason the dog started wagging her tail and jumping up and down is because she was excited to play with the ball. I think this is correct because with her senses (which are higher than those of a human) she could smell the ball and recognize Tom, Vickey, and her scent on it. This would make her excited to play with the ball because it has familiar scents, and may remember the game of fetch they played last night. She also may be able to tell it was the ball they played with last night via sight.

16

The dog jumps around because she's excited to play with them. When Tom and Vicky throughs the ball the dog's senses tell the dog to go get the ball. Also when it's done getting the ball the dogs senses tell her go to Tom and Vicky and put the ball in there lap like the dogs telling them to through it again.

8

Tom and Vicky's dog got so happy because their dog uses her senses to find the ball. To smell the ball and the ball usually has a smell because they have played fetch before and their dog knows how it smells. So the dog remembers how it smells so all the dog has to do is smell for the ball.

16

The dog sees the ball and can tell it's time to play with it because of a dog's sense of sight and smell.

8

The reason why Tom and vicky's dog starts to jump up and down and Wiggling her tail is because when she sees it she remembers that that's what they use to play with. She also uses some of her senses like vision, she remembered what color the ball was she also used smell because when Tom or vicky pick up the ball up their personal scent will get on it.
