8

The dog is happy (That's why it is wagging its tail and jumping around). The dog can see the toy by its eye and the dog knows what the toy smells like so he can smell it. Then all of that information goes to the brain of the dog so then the dog knows that it is his dog toy.

8

Tom & Vicky's dog jumps around when she sees the ball they use to play "Fetch" with because they have not played with it in a long time and she can't smell the scent of the ball.

16

Because when dogs get excited they jump up and wag their tail. The dog will like to play fetch.

16

The dog wagging her tail because she knows that it is play time. She used her eyes to see the ball. She/he may have smelled the ball too.

8

Tom and Vicky's dog starts wagging her tail when she sees the ball because the dog can still smell the smell from when they played fetch the other day because dogs have a very good sense of smell, 1 million to 100 million times stronger than a human's sense of smell. The dog also probably hears the same sound the ball made yesterday, so she knows she is going to play some type of game. In conclusion, this is why the dog wagged her tail when she saw the ball.

8

Tom and vichy's dog starts wagging her tail and jumping around when she sees the ball because the dog is excited. The dog is excited because the dog can use her sense of smell and sight plus hearing to find or track the ball. The dog's sense make it easier because when the dog smells it. It makes it easier to track. And when the dog sees it he knows where to go to get the ball. And the dog's hearing can help the dog determine where the ball landed.

16

The dog was wagging its tail because Tom and Vicky pulled out the ball to play fetch. The dog sensed the ball and got all excited because the dog really really really wanted to play fetch. The dog seemed like joy, excitement, energetic, and playful.

8

Their dog gets excited because the dog can see that it is the ball they have played with, and this can let it understand it is about to play. Also since the dog has smelled the ball before when they are playing. So, it smells the ball and knows the same sent.

16

i think the dog is excited to play with the Ball the senses that the dog uses is sight to see the Ball so she knows its time to play

16

I think the dog wags her tail and jumps up and down is because she is excited to play fetch. She can see the ball and can smell the ball that it's the one they've usually been using. The dog can hear the ball that they are going to play with. Since a dog's sense of smell is 1 from 100 million times stronger than a human's, sense of smell they can smell it and their ears has more muscles in their ears, they can hear better.

16

Tom and vicky's dog wags her tail because the dog can smell the ball in their hand. The dog jumps and wags her tail because she is ready to play. The dog sensed that they have the ball and ready to play and the dog would also see the ball. This is why Tom and vicky's dog waged her tail.

8

Tom and Vicky's dog starts wagging his tail and jumping up and down because the dog senses that she's going to get played with and get to bring the ball back to Tom and Vicky.

8

According to the text Tom and Vicky's dog jumps up and down because she smells her larva on the ball and remembers that she was playing with it. Also she uses her senses, another sense that she used is eye sight she seen that that was the ball she was playing with.

16

She can use her sense to see the ball,  
and smell the ball, and use her hearing  
sense to hear the ball and she's happy  
to play.

8

Tom and Vicky's dog was excited to see the ball because she knows that's the ball they use to play "fetch" with. She looks at it with her eyes and the information goes from her eyes to her brain. She knows what it smells like because she plays with it a lot. She uses sight and smell to figure that's the ball they play fetch with.

16

The dog gets excited when she sees the ball because she knows they are going to play. She knows this because she sees the ball and recognizes it. She also smells the ball. She smells her scent and their scent on the ball. The dog has a better sense of smell and sight than a human does. The dog hears the ball bouncing and recognizes that is the sound the ball makes when it fetches it.

16

The dog is jumping up and down because it sees the ball it used to play with. That is sense of sight.

16

The Dog Knows When Vicky has his Ball he Knows that they are going to Play. Because the Dog has more senses than humans.

16

The dog gets excited because, she knows what they do with the ball. She remembers that they throw and she retrieves the ball. The dog uses her eyes to see the ball, the eyes send a signal to the brain. The brain remembers that she has fun playing this game.

16

the dog can sense that they are getting ready to play with it so it got excited
